

InterLearn

Learning without borders

Master Feature Document · v1.0

Product Overview

InterLearn is a pay-as-you-learn education marketplace for emerging markets. Students pay only for real learning time, streamed in micropayments as small as ₦5 per minute, using the Interledger Protocol to route payments across every mobile money network. Students pick verified teachers like they would a ride-share driver, set their own spending limits, and can pause or stop at any time. Teachers earn instantly, protected by escrow, with payments splitting automatically between teacher, platform, and safety reserves in a single transaction.

The platform operates across three core markets — Africa, Southeast Asia, and Latin America — anywhere mobile money dominates and upfront payment is a barrier to education.

Section 1 — Onboarding & Account Management

1.1 Language Selection

The very first screen a new user sees on opening the app — before any registration begins — is a language selector. This ensures every subsequent screen, prompt, and instruction is immediately in the user's preferred language.

Supported launch languages (V1):

- English
- French
- Portuguese

- Spanish
- Arabic
- Swahili

Behaviour:

- Language preference is saved to the user's account on creation
- Language can be changed at any time in account settings
- All platform UI, notifications, error messages, legal text, and onboarding copy is fully translated
- Right-to-left layout automatically activates for Arabic

1.2 Account Creation & Onboarding

New users register with a name, phone number or email, and password. The onboarding flow is minimal — the platform captures only what is needed to get the user to their first session as quickly as possible.

Registration steps:

- Language selection (screen 1 — before anything else)
- Role selection — Learner or Creator (see Section 1.3)
- Name, phone number or email, and password
- OTP verification via SMS or email
- Profile photo (optional at signup, prompted again after first session)
- For Creators — skill and subject area selection to begin verification queue

1.3 Role Selection

After language selection, every new user chooses their primary role — Learner or Creator. This determines their default dashboard, available features, and onboarding path. Users can hold both roles simultaneously (a teacher who also takes courses) and can switch context within the app at any time.

- Learner — access to course library, teacher marketplace, wallet, spending controls, and progress tracking
- Creator — access to content upload, pricing tools, earnings dashboard, verification queue, and live session management
- Dual role — full access to both dashboards; toggled via a role switcher in the top navigation

1.4 Secure Login System

Separate authentication flows for Learner and Creator accounts, with session persistence and security controls.

- Email/phone + password login
- OTP-based passwordless login option
- Biometric login (fingerprint/face ID) on supported devices
- Remember device option for trusted devices
- Automatic session timeout after inactivity
- Two-factor authentication optional for all users, mandatory for Creators above a monthly earnings threshold

Section 2 — Learner Features

2.1 Teacher Marketplace

Learners browse and discover verified teachers in a searchable marketplace. The experience is designed to feel like choosing a trusted professional, not scrolling through an anonymous listing.

- Search by subject, language, price range, rating, and availability
- Teacher profile card showing: name, subjects, verified badges, per-minute rate, rating, and total sessions taught
- Ratings visible only from verified students who completed and paid for a session — no anonymous reviews
- Instant session request if teacher is currently online
- Scheduled session booking for a future time slot
- Preview a teacher's sample lesson before booking

2.2 Student Spending Controls

Learners are never passive in InterLearn's payment system. Full transparency and control is available before, during, and after every session.

Before a session:

- Set a session spending cap (e.g. maximum ~~₦~~500 per session)
- Set a daily learning budget (e.g. maximum ~~₦~~1,500 per day)
- Choose auto-approve extensions up to a defined limit
- Or require manual approval for any spending extension

During a session:

- Live payment meter visible at all times
- Pause the session and payment at any time
- End the session at any time with no penalty
- Prompt appears when approaching spending cap: "Continue for extra ₦500?"

After a session:

- Full payment breakdown: X minutes teaching, Y minutes questions, Z minutes paused
- One-tap dispute if something feels wrong
- Rating prompt for the teacher (verified, cannot be anonymous)

2.3 Progress Tracking

The platform saves exactly where a learner left off across all content types, so learning can resume instantly without losing progress.

- Video resume point saved per video, per user
- Book page position saved per book, per user
- Progress percentage displayed on content thumbnails in the library
- "Continue where you left off" section on the learner home screen
- Completion status tracked — content marked complete once finished

2.4 Cumulative Payment Unlock

Once a learner's total micropayments on a piece of content reach the creator's set full price, that content is unlocked permanently for free — no further charges ever.

- Running total of payments made on each content item displayed to the learner
- Progress bar showing how close the learner is to full ownership
- Automatic unlock trigger when cumulative payments reach or exceed the full price
- Permanently accessible in the learner's library after unlock — even if wallet is empty

2.5 Inactivity Timer

The platform stops charging a learner if they walk away, stop interacting, or the screen becomes inactive. This protects learners from being charged for time they are not actually learning.

- Video player: payment pauses if video is paused, buffering, or the tab loses focus for more than 30 seconds
- Book reader: payment pauses if no page turn or scroll activity is detected for more than 60 seconds

- Live sessions: payment pauses if no audio, video, screen, or interaction activity is detected for more than 30 seconds
- A gentle on-screen prompt appears before the timer triggers: "Still there?"
- Payment resumes automatically when activity is detected again

2.6 Auto-Stop on Empty Wallet

If a learner's wallet balance reaches zero during a session, all content and payment streams stop automatically. No overdraft, no hidden charges.

- Warning notification when wallet balance falls below a user-defined threshold (e.g. ₦200 remaining)
- Final warning when balance is critically low (e.g. ₦50 remaining)
- Graceful stop — content pauses at the exact point it was stopped, not closed
- Learner is prompted to top up their wallet to continue
- Progress is saved at the exact stopping point

2.7 Offline Mode (Pre-recorded content only)

Learners in areas with expensive or intermittent data can download content on WiFi and watch offline. Payment is settled at download time, not per minute.

- Download available on pre-recorded videos and books only — not live sessions
- Payment settled as a flat fee at the time of download
- Downloaded content accessible without any internet connection
- Offline progress syncs back to the platform when internet is restored

Section 3 — Content Playback

3.1 Video Player with Payment Tracking

The platform's web and mobile video player tracks watch time at the second level and streams micropayments only during active watching. Pausing always pauses payment.

- Plays pre-recorded video lessons uploaded by Creators
- 2-minute free preview before payment begins on any video
- Payment stream starts the moment the free preview ends and the learner chooses to continue
- Payment pauses instantly when the learner pauses the video

- No charge for rewinding — rewatching already-paid content is always free
- No charge for buffering — if the video stalls due to internet issues, payment pauses
- Chapter bookmarks — learners can return to where they stopped, paying only for new content
- Live exchange rate display overlay showing learner's currency converting to creator's currency in real time
- Current wallet balance visible in the player interface at all times

3.2 Digital Book Reader with Page Tracking

An in-platform book reader that tracks reading progress at the page level and streams micropayments only for pages actively being read.

- Renders uploaded books in a clean, distraction-free reader interface
- Payment triggered per page turn — not per minute of inactivity on a page
- First chapter available as free preview before payment begins
- Inactivity timer pauses payment if no page interaction is detected for 60 seconds
- Bookmarking — learners can mark specific pages
- Font size and display mode controls (day/night reading mode)
- Page position saved automatically on close

Section 4 — Live Sessions

4.1 Live Session Booking

Learners can book real-time one-on-one or group sessions with verified teachers. Sessions can be instant (if the teacher is online) or scheduled in advance.

- Instant session request — sent to online teachers, accepted within 5 minutes or auto-declined
- Scheduled session — learner picks a date and time from the teacher's availability calendar
- Session confirmation and reminder notifications for both parties
- Teacher can set their available hours and block out unavailable times

4.2 Live Session Room

The live session room is a full-featured teaching environment with real-time payment streaming and activity detection.

Session room features:

- Video and audio call
- Shared whiteboard
- File sharing — teacher uploads notes, diagrams, and resources
- Chat — for links, formulas, and corrections
- Real-time payment meter visible to both teacher and learner
- Session recording — optional, learner owns the recording

Payment rate logic:

- Active teaching → full rate (e.g. ~~¥~~8/min)
- Student asking a question → reduced rate (e.g. ~~¥~~4/min)
- Silence or no activity detected → payment pauses automatically

Activity detection signals:

- Audio activity — is someone speaking?
- Screen activity — is content being shared or written on the whiteboard?
- Interaction signals — chat messages, whiteboard strokes, file uploads
- Camera activity — is the teacher present on screen?
- If none of these signals are active for more than 30 seconds, payment pauses automatically

4.3 Group Sessions

One teacher can host a live session with multiple paying learners simultaneously. Each learner pays a reduced per-minute rate. Escrow is managed independently per learner.

- Teacher sets a group session rate (lower than one-on-one rate)
- Multiple learners join the same session room
- Payment streams from all learners simultaneously to one teacher wallet
- Each learner's escrow is managed independently — one learner's dispute does not affect others
- Maximum group size set by the teacher at session creation

Section 5 — Creator Features

5.1 Content Upload & Pricing

Creators upload pre-recorded video lessons and digital books through a simple upload interface, set their pricing, and publish to the marketplace.

- Video upload — supports standard formats (MP4, MOV); automatic processing and compression
- Book upload — supports PDF and EPUB formats
- Content is broken into chapters or modules, not one long file
- Per-minute rate setting for video content
- Per-page rate setting for book content
- Full price setting — the amount at which cumulative payments trigger permanent unlock
- Content title, description, subject tags, and language declaration
- Thumbnail upload or auto-generated from video
- Preview clip designation — which 2 minutes are free to all learners
- Publish, unpublish, and draft states

5.2 Live Earnings Counter

Creators see their earnings arriving in real time — not at the end of the month, not in a batch payout. Every payment stream is visible as it happens.

- Live counter on the Creator dashboard showing earnings accumulating in real time during active sessions
- Earnings displayed in the creator's local currency
- Per-session earnings breakdown after each session ends
- Running daily, weekly, and monthly totals
- Visual confirmation that ILP currency conversion worked — shows both the learner's original currency and the creator's received currency side by side

5.3 Creator Dashboard

A full analytics and management dashboard for Creators to track performance, manage content, and monitor earnings.

- Total earnings overview — all time, monthly, weekly, daily
- Per-content performance — watch time, revenue, number of learners, completion rate
- Learner engagement analytics — where learners pause, rewind, or drop off
- Live session history — past sessions, ratings received, duration, earnings
- Content library management — edit, unpublish, or delete content
- Payout history and upcoming scheduled releases from escrow

5.4 Teacher Verification System

No creator can go live on InterLearn without passing all five verification layers. This protects learners from unqualified or dishonest teachers and builds the platform's trust reputation.

Layer 1 — Identity verification:

- Government ID upload (national ID, voter's card, international passport)
- Selfie match against ID photo
- Phone number verification via OTP

Layer 2 — Skill proof (one of three paths):

- Exam path — take a subject-specific test, pass above 70%
- Certificate path — upload degree, teaching certificate, or professional qualification; reviewed by human moderator
- Demo lesson path — record a 10-minute sample lesson; reviewed by subject matter reviewers

Layer 3 — Reputation system:

- First 5 sessions are probationary — heavily monitored
- Only verified learners who attended and paid for a session can leave reviews
- Rating manipulation triggers automatic flag for human review

Layer 4 — Payment protection:

- Teacher rate set upfront — cannot be changed mid-session
- Escrow holds all funds until session completion
- Chargeback disputes reviewed within 24 hours

Layer 5 — Behaviour monitoring:

- AI monitors session activity patterns
- Flags: very short sessions with full charges, repeated disconnections, learner confusion reports
- Human reviewer escalation for flagged accounts
- Three verified complaints result in automatic suspension pending investigation

Section 6 — Payments & Wallet

6.1 InterLearn Wallet

Every user — learner and creator — has an in-app wallet. The wallet is the primary financial instrument on the platform and supports multiple funding and withdrawal methods.

Funding methods:

- Standard bank card (Visa, Mastercard)
- Mobile money (MTN MoMo, Opay, Airtel Money, M-Pesa, and other regional networks)
- Bank transfer
- USSD top-up
- Learning credits from NGOs, employers, or government programs

Wallet features:

- Real-time balance display
- Full transaction history with timestamps and session references
- Low balance alerts at user-defined thresholds
- Withdrawal to mobile money or bank account for creators

6.2 Automatic Payment Split

Every payment on InterLearn splits automatically the moment it is streamed — no manual reconciliation, no end-of-month payouts.

- 75% → Teacher wallet (creator earnings)
- 15% → Platform fee (InterLearn revenue)
- 5% → Teacher rating insurance fund
- 5% → Dispute and refund reserve

This split happens per minute, per second — across every active session simultaneously.

6.3 Escrow System

Payment does not go directly to the teacher in real time — it streams into an escrow account and releases in verified blocks. This protects both parties.

- Every 10 minutes of verified teaching — escrow releases that block to the teacher
- If a learner raises a dispute — that block stays frozen pending review
- If a session ends normally — full escrow releases immediately
- If a teacher disconnects without warning — escrow refunds the learner for that block automatically

6.4 Learning Credits & Scholarships

NGOs, companies, and government programs can deposit learning credits directly into learner wallets. Credits are locked to specific subjects or teacher tiers, enabling sponsored learning without cash changing hands.

- Credit deposit by verified sponsors via the platform's institutional API
- Credits displayed separately from cash balance in the learner wallet
- Subject lock — credits can be restricted to specific categories (e.g. STEM only, vocational only)
- Tier lock — credits can be restricted to verified teachers above a certain rating threshold
- Credits cannot be withdrawn as cash — only used for learning

Section 7 — Interledger Protocol Integration

7.1 Web Monetization Integration

InterLearn uses Interledger Web Monetization to safely convert wallet balances into live, second-by-second payment streams during content consumption.

- Payment stream activates the moment a learner begins watching or reading paid content
- Stream pauses instantly when the learner pauses, stops, or goes inactive
- No batch processing — every second of learning is a discrete, settled micropayment
- Web Monetization API integrated into both the video player and book reader

7.2 ILP Payment Infrastructure

The Interledger Protocol is the payment backbone that makes per-minute, cross-network, split micropayments economically viable at African and emerging market price points.

- Payments broken into fractions of a cent that move instantly across networks
- Supports transactions as small as ₦1 — impossible with traditional processors like Paystack or Stripe due to minimum fee structures
- Native streaming — no batch processing, no end-of-day reconciliation
- Routes across mobile money networks, wallets, and banks in a single transaction

7.3 Interledger Payment Pointers

Every creator on InterLearn has an Interledger Payment Pointer — a secure address that routes streamed money directly into their real wallet without delays.

- Payment Pointer auto-generated on creator account creation
- Pointer links directly to the creator's nominated withdrawal destination (mobile money or bank)
- No intermediate holding — money routes directly to the creator's real wallet
- Pointer can be updated by the creator in account settings

7.4 Multi-Currency Support

A learner can pay in their local currency while the creator receives a completely different local currency — the Interledger network handles the conversion in flight.

- Multi-currency test wallets for each supported market currency
- Learner pays in their local currency (e.g. NGN, KES, BRL)
- Creator receives in their local currency (e.g. GHS, TZS, COP)
- ILP handles conversion automatically — no manual FX steps for either party
- No surprise conversion fees — exchange rate locked at session start and displayed to both parties

7.5 Live Exchange Rate Display

During any cross-currency session, the video player and session room display a live exchange rate overlay showing how the learner's currency is converting to the creator's currency in real time.

- Exchange rate refreshed every 30 seconds during an active session
- Displayed as a small, non-intrusive overlay — learner can minimise it
- Shows: learner's currency → creator's currency, current rate, and total paid so far in both currencies
- Creator's dashboard also shows the conversion confirmation post-session

Section 8 — School Mode

8.1 Institutional Accounts

Universities, secondary schools, and vocational institutes can use InterLearn in School Mode — a controlled environment where the institution manages teacher assignments, curriculum, and payment.

- Institution creates an organisational account with administrator credentials

- Administrator invites teachers and students to the institution's closed environment
- Institution can vet and approve teachers additionally beyond the standard five-layer verification
- Payment can be handled by the institution (per-student billing) or passed to learners with institutional spending caps

8.2 School Mode Controls

- Assign specific teachers to specific students or student groups
- Set approved topics and curriculum — teachers can only teach within designated subjects
- Progress reports generated for administrators — cohort-level and individual student views
- Parent view-only access — parents can see their child's sessions, progress, and spending without interacting
- Session monitoring — administrators can view (not interrupt) live sessions for quality assurance

Section 9 — Infrastructure & Storage

9.1 Central Database

A centralised database stores all user accounts, content metadata, pricing, progress data, session records, transaction histories, and platform configuration.

- User accounts — learner and creator profiles, verification status, preferences
- Content library — video and book metadata, pricing, chapter structure, upload status
- Session records — all live and pre-recorded sessions with full activity logs
- Transaction ledger — every micropayment, split, escrow block, and payout
- Progress data — per-user, per-content watch position and completion status
- Ratings and reviews — verified session ratings with tamper detection

9.2 Cloud Storage

All uploaded video and book files are stored on a secure, scalable cloud storage infrastructure with CDN delivery for fast loading across low-bandwidth environments.

- Video files stored with multiple quality variants for adaptive bitrate streaming
- Automatic compression on upload to reduce file sizes without quality loss

- CDN edge nodes in West Africa, East Africa, Southeast Asia, and Latin America for low-latency delivery
- Encrypted at rest and in transit
- Creator content backed up with 99.9% uptime guarantee

Section 10 — Multi-Language System

10.1 Language Selection at Onboarding

The first screen every new user sees — before registration begins — is the language selector. This ensures the entire onboarding experience is immediately in the user's chosen language.

- Full-screen language picker as the app's entry screen
- Language stored to the user's account on creation
- All subsequent screens — registration, onboarding, dashboard, notifications, legal text — rendered in the selected language immediately

10.2 Supported Languages (V1 Launch)

#	Feature	Description
1	English	Primary language — Nigeria, Ghana, Kenya, Uganda, South Africa, global
2	French	West and Central Africa — Senegal, Côte d'Ivoire, DRC, Cameroon
3	Portuguese	Brazil, Mozambique, Angola, Cape Verde
4	Spanish	Latin America — Mexico, Colombia, Argentina, Peru
5	Arabic	North Africa and Middle East — Egypt, Morocco, Tunisia
6	Swahili	East Africa — Kenya, Tanzania, Uganda, Rwanda

10.3 Language Settings

- Language preference changeable at any time in account settings — no account reset required
- Right-to-left layout automatically activates for Arabic
- Creator content language is declared at upload — learners can filter the marketplace by content language
- Platform UI language is independent of content language — a learner can use the platform in French while watching an English lesson

Section 11 — Notifications & Communication

- Session booking confirmations and reminders — sent to both teacher and learner
- Spending cap alerts — notified at 75% and 90% of cap reached
- Low wallet balance alerts — at user-defined threshold
- Earnings notifications — creator notified of each escrow release
- Dispute status updates — both parties notified at each stage of resolution
- Teacher verification status updates — notified at each layer completion
- New learner review received — notified to creator
- Content unlock notification — learner notified when cumulative payments unlock content permanently
- Weekly learning summary — learner receives a summary of time spent and subjects covered
- Weekly earnings summary — creator receives a summary of sessions, content performance, and total earnings

Section 12 — MVP & Phased Rollout Plan

The MVP is the smallest version of InterLearn that works end-to-end. A learner signs up, tops up a wallet, clicks play on a video, gets charged by the minute, pauses and stops paying, and a creator watches money arrive in their dashboard in real time in their local currency. If that loop works cleanly — InterLearn is real. Everything else is phased in after that core is proven.

Phase 1 — MVP (16 core features)

These are the features without which the product literally does not function. No exceptions.

#	Feature	Description
1	Language selection at onboarding	First screen before any registration — English and French minimum at launch
2	Account creation & onboarding	Minimal mobile-first registration — name, phone/email, OTP verification
3	Role selection	Learner or Creator chosen at signup — dual role supported
4	Secure login system	OTP login, session persistence, basic 2FA

#	Feature	Description
9	Inactivity timer	Payment pauses when learner walks away or screen goes inactive
10	Auto-stop on empty wallet	Content pauses gracefully when wallet balance hits zero
12	Video player with payment tracking	Second-level watch tracking with ILP payment stream
17	Content upload & pricing	Video upload with per-minute rate and full price setting
21	InterLearn wallet	In-app wallet funded by bank card and mobile money
22	Automatic payment split	75/15/5/5 split per second — no manual reconciliation
23	Escrow system	10-minute block releases with dispute freeze and auto-refund
25	Web Monetization integration	ILP Web Monetization API embedded in the video player
26	ILP payment infrastructure	Sub-one-naira micropayments routed across mobile money networks
27	Payment Pointers	Direct routing to creator's real wallet without delays
31	Central database	All accounts, content metadata, transactions, and progress
32	Cloud storage & CDN	Encrypted video storage with edge delivery for low-bandwidth markets

Phase 2 — Credible Product (7 features)

These features do not break the product if absent in MVP, but without them the platform does not feel complete to real users or investors. Build these immediately after the MVP loop is proven.

#	Feature	Description
6	Student spending controls	Session caps, daily budgets, live meter, post-session payment breakdown
7	Progress tracking	Resume position saved per video and book across sessions
18	Live earnings counter	Real-time earnings display in creator's local currency
19	Creator dashboard	Basic analytics — earnings, watch time, content performance
20	Teacher verification system	Layers 1 and 2 minimum — identity and skill proof
28	Multi-currency support	Learner pays in one currency, creator receives another via ILP
34	Notifications system	Session confirmations, spending alerts, earnings notifications

Phase 3 — Full Platform (11 features)

These features complete the full InterLearn vision. Build after Phase 2 is live and user feedback is incorporated.

#	Feature	Description
5	Teacher marketplace	Full search, browse, ratings, and verified badge display
8	Cumulative payment unlock	Permanent content ownership once micropayments reach full price
11	Offline mode	Download pre-recorded content on WiFi, watch offline
13	Digital book reader with page tracking	Per-page payment with inactivity detection
14	Live session booking	Instant and scheduled one-on-one teacher sessions
15	Live session room	Video call, whiteboard, chat, file sharing, payment meter
16	Group sessions	One teacher, multiple paying learners simultaneously
24	Learning credits & scholarships	NGO and employer credit deposits locked to subjects or tiers
29	Live exchange rate display	Real-time FX overlay in video player and session room
30	School mode	Institutional accounts with teacher assignment and curriculum control
33	Multi-language system	Full 6-language UI with right-to-left support for Arabic

MVP Success Criteria

Phase 2 build begins when all of the following are confirmed:

- A learner can sign up, fund a wallet, and watch a video being charged by the minute — without manual intervention
- Payment pauses correctly when the learner pauses the video or goes inactive
- A creator can upload a video, set a price, and see earnings arrive in their dashboard in real time
- The 75/15/5/5 payment split is verified on every transaction
- At least one successful cross-network payment completed — learner on mobile money, creator on bank account
- Zero overcharging incidents in the first 100 test sessions

Complete Feature Summary

#	Feature	Description
1	Language selection at onboarding	First screen before registration — 6 launch languages
2	Account creation & onboarding	Minimal, mobile-first registration flow
3	Role selection	Learner, Creator, or dual role — chosen at signup
4	Secure login system	OTP, biometric, 2FA, session management
5	Teacher marketplace	Search, browse, and book verified teachers
6	Student spending controls	Caps, budgets, live meter, post-session breakdown
7	Progress tracking	Saves position in video and book across sessions
8	Cumulative payment unlock	Content unlocked permanently when payments reach full price
9	Inactivity timer	Payment pauses when learner walks away or goes inactive
10	Auto-stop on empty wallet	Content stops gracefully when balance reaches zero
11	Offline mode	Download pre-recorded content on WiFi, watch offline
12	Video player with payment tracking	Second-level watch tracking with ILP stream
13	Digital book reader with page tracking	Per-page payment with inactivity detection
14	Live session booking	Instant or scheduled one-on-one teacher sessions
15	Live session room	Video call, whiteboard, chat, file sharing, payment meter
16	Group sessions	One teacher, multiple paying learners simultaneously
17	Content upload & pricing	Video and book upload with per-minute/page rate setting
18	Live earnings counter	Real-time earnings display in creator's local currency
19	Creator dashboard	Analytics, content management, payout history
20	Teacher verification system	Five-layer verification before any creator goes live
21	InterLearn wallet	In-app wallet with card, mobile money, and USSD funding
22	Automatic payment split	75/15/5/5 split per second, no manual reconciliation
23	Escrow system	10-minute block releases with dispute freeze
24	Learning credits & scholarships	NGO and employer credit deposits locked to subjects
25	Web Monetization integration	ILP Web Monetization API in video player and book reader

#	Feature	Description
26	ILP payment infrastructure	Sub-N1 micropayments routed across all mobile money networks
27	Payment Pointers	Direct routing to creator's real wallet with no delays
28	Multi-currency support	Learner pays in one currency, creator receives another
29	Live exchange rate display	Real-time FX overlay in video player and session room
30	School mode	Institutional accounts with teacher assignment and curriculum control
31	Central database	All accounts, content, transactions, and progress data
32	Cloud storage & CDN	Encrypted storage with edge delivery for low-bandwidth markets
33	Multi-language system	6-language UI with settings-changeable preference
34	Notifications system	Session, payment, earnings, and progress notifications
